AVOID GERMS ON RESTROOM DOOR PULL HANDLES

Open a Public Restroom Door with your Wrist or Forearm

Cumming, GA.; June 28, 2006 – Fulkerson, LLC received an overwhelming response to the unveiling of the SanitGrasp™ (a patent pending vertical door pull handle which allows a person to exit a restroom with their wrist or forearm) at the NRA show in Chicago, IL. this past May. “The reaction was very positive. Many people commented that it was about time someone invented a solution to grabbing the traditional door pull handle.” said Fulkerson, LLC president Matthew Fulkerson.

Matthew Fulkerson’s belief that the following is a common experience within public restrooms was verified by numerous restaurant and hotel managers and owners.

Typical experience in a public restroom:

1. Use the facilities – probably with an automatic flusher
2. Wash hands – probably with an automatic faucet
3. Exit restroom by touching pull handle – hands once again are contaminated

The SanitGrasp™ is the Solution

Patrons and employees may open the restroom exit door with their wrist or forearm. This provides many benefits:

- Increased the sanitation within an establishment
- Reduced paper towel waste and expense
- Enhanced customer experience
- ADA conformance

“The ability for an establishment to easily rectify a known issue was well received. We have begun testing within some of the most recognized restaurants in the World.” stated Matthew Fulkerson.

Fulkerson, LLC, based in Cumming, GA, was founded in 2005. Fulkerson, LLC may be reached at www.fulkersonllc.com.
