### **SanitGrasp® European Community Patent Open a Public Restroom Door with your Wrist or Forearm**

Cumming, GA.; November 7, 2006 – Fulkerson, LLC received a European Community patent for the SanitGrasp® (a door pull handle that may be operated with a person’s wrist or forearm). “We are excited to expand our product sales to the European community. The increased attention towards germs and transferable diseases has heightened the need for an innovative restroom door pull handle.” said Fulkerson, LLC president Matthew Fulkerson.

The SanitGrasp® was developed to solve the following scenario in a public restroom:

1. Use the facilities – probably with an automatic flusher
2. Wash hands – probably with an automatic faucet
3. Exit restroom by touching pull handle – hands once again are contaminated

#### **The SanitGrasp® is the Solution**

Patrons and employees may open the restroom exit door with their wrist or forearm. This provides many benefits:

- Increased the sanitation within an establishment
- Reduced paper towel waste and expense
- Enhanced customer experience

“The SanitGrasp® offers a rare opportunity to quickly and economically improve a customer’s experience.” stated Matthew Fulkerson.

Fulkerson, LLC, based in Cumming, GA, was founded in 2005. Fulkerson, LLC may be reached at [www.fulkersonllc.com](http://www.fulkersonllc.com).
